REALISTIC DRAWING

Quick Checklist

- [ ] **Proportions Correct:** Check that all parts of the subject are in proportion to each other, so it looks realistic.
- [ ] **Analyze the Subject:** Look at how the light hits the subject and creates shadows, and make sure the shadows are in the right place and are the right value.
- [ ] **Good Range of Values:** Include highlights, midtones, and shadows to give your drawing depth and contrast.
- [ ] **3D Form & Structure:** Use shading to show the form of each object and give the drawing a three-dimensional look.
- [ ] **Value Gradients:** Use value gradients to show the transition from light to shadow, this helps to make your drawings look more lifelike.
- [ ] **No Outlines:** Instead of using outlines, use edges to separate the different parts of the drawing.
- [ ] **Focal Point Focused:** Make sure the most important part of the drawing is detailed and draws your eye.
- [ ] **Light Source Consistent:** Make sure the direction of the light source is consistent throughout the drawing, this will make it look more realistic.

- [ ] **Form and Structure First:** Focus on creating form and structure in the drawing before adding details, they'll look better if you have the structure right first.

- [ ] **Background and Distance:** Be mindful of the background and details in areas that are further away, they should have less detail.

- [ ] **Textures Natural:** Use different shading and mark-making techniques to create different textures, blend them softly together for a natural look. Avoid harsh transitions between textures.

- [ ] **Textures Believable:** Pay attention to the type of texture in each part of the subject, rough textures should look rough, and smooth textures should look smooth.

- [ ] **Details Elevate Drawing:** Use details to enhance the drawing, but be mindful not to overdo it. Too many details can distract from the overall look of the drawing.
